

VU THANH VIEN

FULLSTACK DEVELOPER

I build digital products and operational systems that make complex work easier to run.

PROFILE

Fullstack Developer with 10+ years of experience building web applications, mobile experiences, CMS platforms, ERP/POS products, booking systems, and operational tools. I take ownership from the first problem framing through delivery: clarifying the operating need, shaping a pragmatic solution, delivering quality implementation, and improving it as real usage reveals the next opportunity.

CORE CAPABILITIES

FRONTEND	React, Next.js, Angular, AngularJS, Vue, Nuxt, Ember.js, HTML/CSS, JavaScript
BACKEND & DATA	Node.js, Express, PHP, Laravel, GraphQL, MySQL, MongoDB, Firebase
PLATFORMS	AEM, CMS, ERP, POS, booking, order management, payment and third-party integrations
MOBILE & DESIGN	Flutter, React Native, Figma, Photoshop, Illustrator, product design

SELECTED PRODUCT

GRATIPOS / Co-founder & Fullstack Developer / 2019 - Present

A POS and operations-management product covering products, orders, warehouses, inventory, work, and employees. I built the web management experience with Vue.js and a mobile POS experience with Flutter, with a focus on making daily operations faster, clearer, and easier to scale as the business grows.

WORK EXPERIENCE

2022 - NOW

Freelancer Fullstack Developer

Building personal products and delivering outsourced projects across Japan and Vietnam, adapting to different domains, team structures, and delivery environments.

- Created ERP, POS, booking, customer, clinic, HR, warehouse, and import/export systems focused on reliable day-to-day operations.
- Delivered AEM web experiences for Japanese clients through Sutrux, balancing project standards with clear user journeys and maintainable components.
- Built business websites, Kiot Viet-connected order management, and goods-flow ERP systems with an emphasis on data accuracy, performance, and practical adoption.

2021 - 2022

Bitelle Full Stack Developer

Worked on FWD service experiences and frontend product modules.

- Created new pages and reusable modules with React and Next.js.
- Integrated APIs and managed client-side data flows.

2020 - 2021

Galaxy One Full Stack Developer

Built health-check and Covid-test registration products, portals, and APIs.

- Developed booking portals for users and test-information operations.
- Implemented CRUD APIs, business logic, payments, workers, and third-party services using Node.js/Express, Laravel, MySQL, and MongoDB.

2018 - 2020

System Frontend Developer

Built enterprise web applications and a reusable CMS core.

- Developed Ember and Angular applications with GraphQL for CMS, inventory, sales, purchasing, projects, employee, in/out, and room-booking modules.
- Created reusable table, modal, dynamic-form, and authentication components; used Firebase for lightweight landing pages.

2017 - 2018

**Hanbiro
Company
Software
Engineer**

Developed web, mobile, and API features for collaboration software.

- Built calendar and project-management modules; implemented device calendar synchronisation.
- Built React Native HR and channel apps featuring leave requests, chat, feeds, and to-dos.
- Developed APIs with Yii and CodeIgniter plus scheduled reporting jobs.

2015 - 2017

**Antking
Company
Software
Engineer**

Designed and developed web and mobile solutions for clients.

- Created website and mobile app designs, web applications, APIs, and technical solutions.
- Worked directly with clients to clarify needs and translate them into delivery plans.

EDUCATION

2010 - 2015

**University of Technology Ho
Chi Minh City**

Computer Engineering

2015 - 2016

**University of Science Ho Chi
Minh City**

Advanced Designer - design,
photography, and print

LANGUAGES

Vietnamese - Native

English - Professional working proficiency

PROJECT FOCUS

OPERATIONS

ERP, POS, inventory, warehousing, order management, employee operations, and business workflow tools.

CUSTOMER JOURNEYS

Booking, clinics, customer portals, learning platforms, marketing funnels, and service experiences.

DELIVERY

End-to-end delivery across product discovery, UI design, frontend, APIs, data models, integrations, and iterative improvement.

QUALITY, ADAPTABILITY & AI

- Focus on quality that is visible to users and useful to teams: clear flows, resilient handling of edge cases, readable code, reusable components, and systems that remain practical to operate.
- Adapt quickly to new domains, legacy codebases, modern frameworks, client constraints, and distributed teams while keeping delivery grounded in business outcomes.
- Use AI as a supporting tool for research, exploration, documentation, test ideas, and implementation acceleration - never as a substitute for product judgment, security awareness, validation, or personal accountability.
- Take responsibility for the final decision: understand the context, verify the output, communicate trade-offs clearly, and own the quality of what reaches production.
- Bridge design and engineering to keep the customer experience coherent from first screen to production, while collaborating directly with clients and stakeholders.
